

Technical Data Sheet

G-Lam[®]

G-Lam[®] is produced in two different technologies:

HPL is produced in multi-opening presses under high pressure and temperature. By using different types of resins, it can be either postforming or standard quality. Thanks to this technology, HPL laminates offer high wear & scratch resistance and hygienic surface properties. Wide selection of high-quality colour and finish options are available which in conjunction with our state-of-art production techniques allow us to offer the highest global laminate technology and quality. Laminate is ideal for use in the retail environment, interior decoration, home and office furnitures, kitchen and bathroom worktops, hotels, schools, public buildings and public transportation, in fact almost any application where increased surface characteristics are required.

CPL is produced in continuous presses under high pressure and temperature. Other than having similar characteristics of HPL, CPL offers flexible sizes and thicknesses where the customers can attain their customised requirements.

Remarks :

- (1) HGS = Horizontal Grade Standard Laminate
 (2) HGP = Horizontal Grade Post Forming Laminate
 (3) VGS = Vertical Grade Standard Laminate
 (4) VGP = Vertical Grade Post Forming Laminate
 (5) Migration test conducted at 40°C for 24 hours
 (6) CoC available upon request (ISEGA 37314 U 14)
 (7) The wear and scratch resistance represent an average values between different types of decors . For a specific value please contact sales department .
 The actual values comply with EN 438.3:2016
